

Systemic Anti Cancer Therapy Protocol

## Nivolumab

### Renal Cell Carcinoma

PROTOCOL REF: MPHANIVOL  
(Version No.1.3)

#### Approved for use in:

Nivolumab as monotherapy is indicated for the treatment of advanced renal cell cancer (with clear cell component) that has been previously treated with at least 1 prior line of antiangiogenic therapy (TKI).

ECOG PS 0-1

**\*\*\* Blueteq registration is required \*\*\***

#### Dosage:

Drug	Dosage	Route	Frequency
Nivolumab	480mg	IV infusion	4 weekly until disease progression or unacceptable toxicity

- Dosing delay or discontinuation may be required based on individual safety and tolerability.
- Guidelines for permanent discontinuation or withholding of doses are contained in the 'Dose Modifications' Section.
- For full details on assessment and management of immune-related toxicities refer to [CCC Immuno-Oncology toxicity specific guidance for adverse event management](#).

#### Exclusions

History of pneumonitis, organ transplantation, HIV infection, active hepatitis B or C infection

Active infection requiring systemic treatment

Less than 4 weeks from major surgery  
 History of clinically severe autoimmune disease

**Extravasation risk:**

Nivolumab is a monoclonal antibody- considered to be neutral.  
 Refer to the CCC policy for the '[Prevention and Management of Extravasation Injuries](#)'.

**Dosing in renal and hepatic impairment (Prior to start of treatment ONLY/Baseline):**

<b>Renal</b>	Nivolumab	eGFR < 30ml/min/1.73- limited data use with caution
<b>Hepatic</b>	Nivolumab	Administered with caution in patients with: Moderate (total bilirubin > 1.5 -3 x ULN and any AST) or Severe (total bilirubin > 3 x ULN and any AST*) hepatic impairment. * Within normal limits or high

**Patient Counselling Points**

Women of childbearing potential should use effective contraception throughout treatment and for at least 5 months following the last dose of nivolumab.

Contact the triage team for the following:

- New or worsening cough, chest pain or shortness of breath
- Diarrhoea or severe abdominal pain (with or without blood/mucous)
- Jaundice, severe nausea or vomiting, or easy bruising or bleeding
- Persistent or unusual headache, extreme weakness, dizziness or fainting, or vision changes
- Monitor for signs of infection / sepsis

## Administration:

Day	Drug	Dose	Route	Diluent and rate
1	Nivolumab	480mg	IV infusion	100mL sodium chloride 0.9%. Infused over 60 minutes.

To be administered every 4 weeks until disease progression or unacceptable toxicity

Routine prophylaxis against infusion related reactions is not required. However, monitor during the infusion and treatment given if necessary (antihistamines, steroids etc.).

Please refer to the CCC [Hypersensitivity; Management Prevention Policy](#).

## Main Toxicities:

<b>Nivolumab</b>	
Immune-Mediated Pneumonitis  Pneumonitis occurred in 3% of melanoma patients (including G3 in 0.2%).	Monitor patients for signs and symptoms and evaluate with radiographic imaging and administer corticosteroids for G2 or greater.
Immune-Mediated Colitis  Colitis occurred in 1% of patients (including G3 in 0.5%).	Monitor patients for signs and symptoms and administer corticosteroids for G2 or greater.
Other Immune-Mediated Toxicities: Hepatitis Hypophysitis Nephritis Hyperthyroidism or Hypothyroidism  Less frequently: Exfoliative dermatitis, uveitis, arthritis, myositis, pancreatitis, haemolytic anaemia	Monitor LFTs, biochemistry and TFTs  As above, consider corticosteroids for G2 or greater
Other non-immune adverse events: Fatigue, anaemia, cough, dyspnoea, nausea, decreased appetite, pruritis, rash, constipation, diarrhoea, arthralgia	Symptomatic management for G1/G2 Monitor diarrhoea – as this may be the first sign of colitis
Laboratory abnormalities: Hyponatraemia, hypocalcaemia, hyperglycaemia, hypertriglyceridaemia	Monitor at each cycle

## Investigations and treatment plan:

**If suspicion of endocrinopathies:** request TSH, T4, T3, ACTH, cortisol, LH, FSH, testosterone (men) and prolactin (women)

	Pre	Cycle 1	Cycle 2	Home treatment if eligible	Prior to cycle 3	Cycle 3	Ongoing	
Informed Consent	x							
Clinical Assessment	x					x*		Every 12 weeks thereafter or as clinically indicated
SACT Assessment (to include PS and toxicities)	x	x	x				x	Every cycle
OTR/ Go-ahead	x		x				x	Every cycle
Immunotherapy bloods as per Meditech order set: FBC, U&E/renal profile, Magnesium, LFTs (AST, ALT and bilirubin), TFTs, cortisol, blood glucose, LDH, CRP	x	x	x				x	Every cycle
Lipid profile (cholesterol)	x						x	At baseline then if clinically indicated
Fatigue profile as per Meditech order set: B12, folate, Iron profile, vitamin D, Zinc, Testosterone (men only), ESR	x							At baseline then if clinically indicated
Full set of observations ( <i>BP, hear rate, temperature, respiratory rate and O<sub>2</sub> sats</i> )	x	x	x			x	x	Every cycle
Creatinine Clearance (Cockcroft and Gault)	x							Every cycle only if baseline CrCL <40ml/min or creatinine increases above 1.5x upper limit of normal or baseline
CT scan	x							Every 12 weeks/if clinically indicated
Trop-T, CK, pro-BNP	x							<b>At baseline for all Renal and Melanoma</b> and thereafter as clinically indicated (ECG to be reviewed by clinical team)
ECG	x							
Weight recorded	x	x	x			x	Every cycle	

THE CLATTERBRIDGE CANCER CENTRE NHS FOUNDATION TRUST

Height recorded	x						
-----------------	---	--	--	--	--	--	--

\*Formal medical review (can be virtual) to assess the tolerability of treatment and whether treatment should continue (as per NHS England criteria).

Pregnancy test if applicable

## Dose Modifications and Toxicity Management:

### Haematological toxicity

- Dosing delay or discontinuation may be required based on individual safety and tolerability.
- Guidelines for permanent discontinuation or withholding of doses are contained in dose modifications.
- Detailed guidelines for the management of immune-related adverse reactions are provided in the [CCC Immuno-Oncology toxicity specific guidance for adverse event management](#).

Proceed on day 1 if:-

Platelets	Neutrophils	Serum Creatinine	Bilirubin	AST/ALT	Alkaline Phosphatase	TSH and Free T4
≥ 75 x 10 <sup>9</sup> /L	≥ 1.0 x 10 <sup>9</sup> /L	≥1.5 x ULN or baseline	<3 x ULN <sup>a</sup>	<5 x ULN	<5 x ULN	Within range or no change from base line

<sup>a</sup> ULN = upper limit of normal

**Platelets must be within normal range prior to Cycle 1.**

Issue Date: 20 <sup>th</sup> May 2022 Review: 1 <sup>st</sup> May 2025	Page 6 of 9	Protocol reference: MPHANIVOL
Author: Hala Ghaz/Rachel Pritchard	Authorised by: Drugs and Therapeutics Committee	Version No: 1.3

## Non-haematological toxicity

Detailed guidelines are provided in the CCC clinical network immunotherapy acute oncology guidelines. Systemic high-dose corticosteroid with or without additional immunosuppressive therapy may be required for management of severe immune-related adverse reactions.

Toxicity Grade	Action
<b>Grade 1</b> Mild	Continue treatment increase monitoring and provide symptomatic treatment.
<b>Grade 2</b> Moderate	Withhold treatment until resolved to $\leq$ grade 1.  Refer to Immuno-Oncology toxicity specific guidance for adverse event management.
<b>Grade 3 and Grade 4</b> Severe	Withhold treatment.  Treatment will be permanently discontinued for any unresolving grade 3-4, severe or life-threatening adverse reaction at the treating clinician's discretion.  Refer to Immuno-Oncology toxicity specific guidance for adverse event management.
